Pred. No. is the number of results predicted by chance to have a 40: em_htgo_mus:* 41: em_htgo_other:*

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution. SUMMARIES

AK091215	
LOCUS	AK091215 3207 bp mRNA linear PRI 15-JUL-2002
DEFINITION	Homo sapiens cDNA FLJ33896 fis, clone CTONG2007959, highly similar
	to ALPHA-N-ACETYLGALACTOSAMINIDE ALPHA-2, 6-SIALTLERANSFERASE (EC
	2.4.99).
ACCESSION	AK091215
VERSION	AK091215.1 GI:21749532
KEYWORDS	oligo capping; fis (full insert sequence).
SOURCE	Homo sapiens (human)
ORGANISM	Homo sapiens
	Bukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;
	Mammalia: Eutheria: Primates: Catarrhini: Hominidae: Homo.

This entry has been amorbted with sequence quality mission could be the managed with sequence quality fairsters computed by the heave assembly program.

All manually deliced bases have been reduced to quality seco. All manually deliced bases have been reduced to quality seco. The could be the second of a second of a second of a second base of the second of a second base of the country of the country of ANN 1 file.

its separate has been validated by Mittajle complete lugar timperprinting. Computation of the experimentally derived diseat timperprinting. Computation of the experimentally derived diseat the abstractionally dispated sequence consists of both insert and the abstractionally dispated sequence consists of both insert and Small frequency has confused by regissent the entire circular Bob. Small frequency before a visible cutoff approximately do -800 by the boths. The the those is the sequence are no significant remaining discussions between the experimental and predicted visible in requestions. In the sequence of the s all sequence we fittished as Chicks unless otherise noted; all sessions were either double-stranded or sequenced with an inferface beginning or covered by high quality data if i.e., Pared positions of the control of Sequence Validation:
